**October 8, 2013**

## **Interview with Clayton Nolte**

*Clayton Nolte*

Innovator of Structured  
Water Unit

## **Water & Consciousness: Awakening the Magic with Structured Water**

Darius: Hello and welcome everyone. This is Darius Barazandeh and you're tuning in to the You Wealth Revolution Instant Awakenings. I am so excited that everyone is here. I want to thank everybody as well for your thoughts and prayers yesterday. I shared yesterday on our broadcast that last week my mother-in-law passed to be with the Lord and divine source, and so many of you came back with just the most highest and beautiful energy and wishes and cards and lovely things. So I just want to thank everybody and let you know that we're all in this journey together; we're all in this journey in this world. The tears that I cried last week and that I feel and felt, I know many of you are facing, and all of it brings us tighter and tighter as a family and as a community of beings that love each other, and I just want to thank all of you.

Today I'm very excited, because we're going to be talking about one of the most important things I think we can do as a community and that is really bringing this consciousness into our world, but into the structures and systems that are around us every single day. One of the things we sent today was just this incredible information and the discovery of water and what the consciousness of water can do and mean in your life.

I'm going to share my own personal testimony and story because, quite honestly, it's been amazing. I find it really interesting at the You Wealth Revolution because things come in to my past and it's a really neat position to be in, because I get to see things that others in this conscious space are using to keep their vibration high.

And one of those was something that Rikka Zimmerman brought to my attention that she was using. I met Rikka in Austin not too long ago and she had this incredible unit that she was using. This unit she was putting water through, and this unit was actually changing the structure and the vibration of the water that she was drinking. And I of course was fascinated at that point; wanted to try some at that point and instantly I felt a difference. I began to feel more energy, I felt more buoyant, we started laughing uncontrollably.

And sure enough I wanted to have the creator of this on You Wealth Revolution and our guest today is an incredible researcher and inventor and one of the most transformative people you may ever get to talk to. He is very deep and he understands really the science of consciousness.

His name is Clayton Nolte and he's discovered something really powerful about water that we have to share with everybody here. If you're here and you're wanting more health, more vitality, more abundance in your life, more energy, you're going to discover that something about the awakened magic of structured water can not only do this to you, but to animals, to crops and to all the things that we consume on our planet. It can make that much of a difference.

Now, we're going to be going into the science. We're also going to be sharing what you can do with the water right now in your house. It will cost you nothing and begin to bring it back into that state that it needs to be in, because unfortunately the water on the earth is changing and here's the warning I'm going to give to everybody. It's changing. It's no longer structurally functioning the same way that it used to, and we're going to learn why that is and more importantly what we can do to bring it back to into alignment so we can get what we deserve.

You can go to [www.youwealthrevolution.com/now](http://www.youwealthrevolution.com/now) - and share this with friends and families, because what I believe is these things come into my path so that we can share them with others, we can make the world a better place. And you're going to learn how actually you can affect the lives of hundreds of thousands of people just with water being structured. So we're going to talk about that and get started.

One of the things I want to do really quickly is talk about Clayton and what he discovered and what people have been experiencing with his structured water.

Clayton Nolte is the founder of Natural Action Technologies. He's a researcher and the inspired inventor of life-transforming water-structuring technologies. Clayton has spent the last 40 years exploring physics, math and the properties of water and the effects it has on life itself. All life on earth is in need of water and can be affected for the betterment by structured water.

Now, during Clayton's research, he noticed that nature's own structured water has a unique recurring phenomenon of appearing where no water should. With an innate desire to emulate this for more in-depth studies in remote locations and labs, Clayton delved into the inner world of water and has brought toward a dynamic line of water-structuring tools and units to help people restructure water.

His company currently manufactures 14 different structure-watering units and they have plans for new and innovative units in the future.

Now, we're going to talk about what this is and how you can do some of this yourself and how you can go and create this, but I want to share a few things.

One person, Jennifer McQueen, that many of us know, said: 'I've grown so fond and appreciative of these little remarkable devices. I can feel myself able to hold more light and manage the life adventures that show up with so much more grace and ease. Just drinking this water allows my consciousness and evolution to grow while assisting and balancing my health.'

Rikka Zimmerman, a friend of ours and definitely a love of the Youth Wealth Revolution, says: 'I don't leave home without it. I've used all different kinds of products, and this unit has allowed me within the first day to feel the effects. I felt like a deep exhaustion had left my body and now it's just the beginning of these remarkable changes.' She says: 'Our bodies are 70% water and for me, having my body 70% photonic has made being and facilitating consciousness so much easier.'

Another person said: 'I just have to share with you that I work with nature spirits and my work has increased tenfold as a result of using structured water.'

Other people have done studies on plants and many amazing things. I've been using the structured water myself for me and my family, and for me, the second I started using it I instantly... And what I did before this call... I did this every single time, Clayton, and you're probably going to laugh, but I stop using the units for a few days and then I use them again and I notice the difference. I'm calmer, I see almost through things, I have a very different consciousness, I can actually... You know, for this whole time that my mother-in-law passed I wasn't using the unit. And then today I said, well, I'm going to use it again, because I want to see what's going to happen -

I knew this call was coming - and I'm now seeing the other side of what happened.

I'm seeing the other side of what good can come from this in a much clearer way. I'm calmer. I have more energy. I have more peace mind. And I want to share this: we even tried it on our dog Gigi. We put two bowls of water side-by-side, one structured, one not structured, and we found that Gigi always goes to the structured water.

So I know people are curious about what this is, why it is and how it is. So, Clayton, welcome back to the You Wealth Revolution. I'm excited to get started.

Clayton: Well, thank you. Thank you for having me back. With all the things that you've given your clients out there, you know, there's not really much more to say but there always is.

Darius: Yes, it's always a... It's an interesting story and a journey. I've done a lot research on energy obviously here and lived energy, but I've never really known about structured water and structured energy until you came across my path. What is structured energy?

Darius: Basically, structure... all it means is organization. So the water is more organized when it's structured. And what that does is brings about qualities of health and wellbeing to everything it comes in contact with. It makes everything more efficient - and I'm saying everything. Not only people. It makes machinery more efficient, makes cars more efficient and, and, and it keeps going and going and going.

We're constantly involved in more research, more research and discovering more and discovering more, and I've got to say really that the most magnificent researchers are the people themselves, the people all over the world now utilizing these structured water units and telling us the results, telling us what is happening for them - like you are. You're relating all the wonderful attributes that have come for you.

So yeah, it's a magical world and we are providing... well, I'll say technology that opens that magic up to be more visual, more available to each and every person who chooses this path.

Darius: I love it. I want to ask this question: The natural hydrological cycles on earth, what were they like 40 to 50 years ago and how are they different today? Why does that matter to us?

Clayton: Well, the natural hydrological cycle is the way that nature has of neutralizing all of the energy in the water, the negative and/or, let's say, the radiation energy, the energy of all the negativity that occurs in water.

So what happens in the natural hydrological cycle basically is water evaporates, it goes up into the atmosphere and it becomes in a sense structured. And that structure basically is to neutralize, again, the toxins that the water carries and to become more healthy.

Then it attaches to a particle of dust and starts building and building and eventually gets heavy enough to come down as rain. 50, 60 years ago, when that rain came down that rain was absolutely pristine. It was perfectly balanced and healthy. Today, with all the toxins in the air as that rain comes down, it is again being caught up into the toxic world.

Water has the innate ability to protect life from those toxins so it starts attaching within the water collectiveness whether it's in a lake or a pond or in the ground water. It's holding onto the toxins that pretty much are there. I mean, if they come into life itself, it burns it, it makes life less active, less... Let's say what it does is it stymies or eliminates conscious awareness.

The more toxins that you consume, the more toxins that your body is pounded with, the less likely you are to become consciously aware, consciously open, consciously available and alive.

That's the hydrological cycle. Like I said today, today the water doesn't... Even though it comes down toxic, you can water a yard day in and day out from ground water, from city water or whatever, and just maintain a green scape, but you have to water it everyday. You get a sixteenth of an inch rain and everything just jumps up with life. So rain still has qualities; it just has a lot of toxins also.

Darius: Yeah. The astounding thing to me is that water as this source has a certain memory. That was the thing when I discovered that it had a memory, it was actually surprising and shocking to me, but then also made sense, because water tends to bind energy.

Let's talk about the memory in water and what that means for us here. When we say memory, what is it remembering? What is binding to it? What is it holding on to?

Clayton: Well, basically the memory is holding onto the memory of everything that it passes through and everything that it passes by since it came out of nature. So think about it. Water in a city, in a community, is recycled 23 times before it's allowed or can escape back through the natural hydrological cycle. So that water is holding the memory of everyone that it's passed through since it came out of nature. 23 times it's recycled and put back into source water, ground water, tap water for the majority of cities in the United States and primarily, probably, all over the world now.

But again all that stuff then is... I mean, it's the memory of the energy. It's an energetic memory. So in the physical sense, there's a lot of apparatuses out there that remove the physical, our own units, distillation. They remove the physical components in the water, but there's nothing out there other than structuring that can't eliminate the memory and neutralize the memory.

So simple structuring neutralizes the memory of all toxins energetically, and energetically enhances the memory of all nutrients. So as you consume it, the hydration is instantaneous and everything that's good in the water is made instantly available at the cellular level.

Darius: Wow. Okay. So we're getting in questions from a few people - actually a bunch.

Send in your questions to Clayton and myself. I want to make sure that we get them, because this is a little different topic than we've covered before but here's the thing: we are living and being these high vibration conscious beings and the number one thing we need to sustain us is water. And if water is holding this memory, the question is: what is that doing to our consciousness?

Now, Clayton, quick question. What type of memories are being held by the water and is it good memories, bad memories? Is it emotion? Is it chemicals? What would be sort of the array of things that fall under memory?

Clayton: The answer is yes to all those things you listed. Emotional memory, anger, stress, all those memories, but also the memory of fluoride, chloride, lead, arsenic, all the toxins that are in normal surface water. Also the toxicity of fuels and the toxicity of medications. You have to remember that water is the great dissolver. It can dissolve over 70-some thousand different elements.

It dissolves everything. It's magical in that regard. But also in that dissolving again, when the water passes by something, it remembers it. So think about this. You have all these stores and have all these bottled water. Every person that walks down through that aisle, if they're angry or if they're distressed, the water picks that memory up. It remembers everything.

Darius: Wow.

Clayton: It's not good. So what structuring does is neutralizes that memory. It virtually instantaneously neutralizes a memory of all toxins and all negative thoughts, all distress, all stress, all anger, and the more that you use it, the less likely it will occur in your life. We have video, we have testimonials. It's happening all over the world.

Darius: I know. I mean, I've seen this in my own life. I've seen this with my pet. I've seen this just through the stories that come in to You Wealth as people are using this. 40, 50 years ago, most cities were doing what? They were getting their water from streams and lakes, or were they recycling waste water? What's different now?

Clayton: 50 years ago, actually most cities due to the growth of these cities they have to get more and more water. In the 1940s is when most cities ran out of ground water. They were pumping water out of the ground to serve the community, but when they can no longer get enough water out of the ground, then they started taking it from the rivers, the streams, the lakes, and on coastal regions they're taking it from the ocean - desalinating.

But again that water, when you start talking about recycling grey water, they're taking the grey water back into the city processing and they add chemicals and they do a lot of chemical processing. I don't believe that there's many cities that actually remove... They remove the physical, but they have no concept of the energetics that are involved in water, no concept.

My perspective is from energy perspective. My world is physics, energy. And the world of the city and the majority of industry out there is the old paradigm and it has to do with the physical world. Everybody's looking at the physical. And they have no education... well, they have no concept of the energetic world.

So basically what we're doing is we're bumping them and we're doing it from the grassroots because, believe me, if I had gone to a city with this technology, the money that's involved in chemicals in the city realm, in filters from the city realm, I would not exist. Believe me, I would not.

So we are coming at this from the grassroots level affecting and/or aiding the public, the human element of all this to get a foothold, and know thyself, have dominion. Then we can change the cities, then we can change government, we can change everything, but the people have to find their place, their secure foundation in all of this and this is what structured water does. It brings the human element into a place of having a solid foundation knowing thyself. And we're getting that feedback constantly. I mean, it's a beautiful thing. Believe me, beautiful thing.

I want to tell you a story about... A guy called me directly. He called me directly and he said he has had a structured water unit for a month or two. He couldn't see anything changed for him, but he said: 'I give the water to my dog and my dog drinks the water.'

And I told him there's a money-back guarantee. You can send it back in, we'll give your money back in 90 days or whatever it is. And he said: 'No, no, no.' He said, 'I wouldn't give this up for anything and the reason is my dog loves it.' There you go. 'My dog loves it.'

Darius: Our pets are more intelligent and more receptive. Pets know when something is not good for them. They won't eat certain things. They won't be around certain things. They know energetically.

I wanted to talk about the spin, because I think that's part of this whole structuring paradigm that people may not be accustomed to or been at least exposed to. The spin and the flow, what does it have to do with water and being structured?

Clayton: Well, basically what happens in these natural action technology... the technology itself places water in a double vortex. Basically the water is spinning or vortexing to the right and to the left simultaneously. And even right now. If you just stand up in the room, you put your arms out and you turn your body one time to the right, all the toxins in your body escape through your skin. A right spin creates an atmosphere where your toxins leave out through your armpits or out through your skin, so it's escaping that way.

When you turn your body to the left one time, what it does is it creates an atmosphere where the toxins have to go out your elimination system. They actually go to the center, but they have to go through your elimination system to escape.

So what we recommend for people, if they're going to do it through spin or through vortexing or through the turn – and you look this up – the turn. There is the whirling dervishes. They live inordinately long lives and it's all through the turn.

That's what's happening in these units. So you have a vortex, and a vortex is like a tornado or a cyclone and it's creating enormous speeds and enormous pressures.

The technology, mathematical, is a very sophisticated, let's say, journey, if you're going to actually look at it from a mathematical point of view. But from the real-life point of view, what happens in this double vortex is it brings water into a perfect balance. And life is all about balance. In nature, everything that is flourishing is in balance. When it's not in balance, it dies or it becomes... It just dies.

So what this water does is it brings everything into balance. And... Go ahead.

Darius: I've heard you talk about apple, like an apple when it falls from a tree it spins in a certain direction and then that starts sort of like the process of it decaying is sort of set into motion.

Tell me about that, because it's interesting how nature is so intelligent and gives us these signals yet so many of us don't realize the secrets are in nature and some of these mysteries.

Clayton: Okay. The apple. When the apple is growing - and all plants when they're in a growth state, that growth, the energy of creation is left spin - feminine. So the energy is spinning to the left and so that's creation energy.

When an apple is picked or, let's say, disrupted, or you pick any fruit or vegetable and pull it from its source, immediately it goes into a decomposition energy basically, which is right spin - masculine, heat. It creates more energy in the form of heat. Back to left spin, is colder creation energy. Everything that you would pick would primarily instantly go into a decomposition energy.

Now, what we have learned in the industry of organic gardening and farming and all the other plant growth is that when you use structured water, that decomposition is held off. The plant or the apple or the orange or the grapefruit or the tomato maintains the balance of both left and right spin when it's picked. So it creates an inordinate longer shelf-life. It can be perfectly sound and healthy for a longer period of time because of the balance that's created from structured water.

Darius: Wow. Very interesting. And I know there's been some studies and things that even people have been reporting back about their crops, etc., and we'll be talking about that.

We've got a question from Janine who's asking about awakening consciousness and expanding consciousness and bringing in more light. Can structured water have an effect on that? What have you seen, Clayton, and kind of what's your thoughts on human consciousness and structured water?

Clayton: Absolutely. Again in the human element when we are in balance and we're basically toxic-free, one of the primary things that happens when drink structured water is your whole physiology becomes toxic-free. So your body... again structured water instantaneously is available for full hydration at the cellular level. You don't have to do any work to get there. And you can go back through how much work your body would have to do if you weren't drinking structured water.

So your immune system is fully engaged and full on, and everything in your body becomes more in alignment with what it's truly meant to do and to be.

One of the really big things here is what structured water does is it places calcium, which is... Calcium is the building block for life and in the form that it's in in most instances - and I can tell you why it's this way - but the form that in is it's hard. When calcium comes in contact with anything, it adheres. Calcium adheres through the self and everything that comes in contact with.

When you structure the calcium and the water, the calcium goes into the solution, and in solution, as it's passing through your body, it dissolves the pockets of calcium that have built up. And one of the main places that calcium is built up for most people is the area of the third eye. So as this calcium is in solution, they start dissolving those pockets of calcium that are built up and create, let's say, an inability to see, to see beyond what you would normally see with your eyes.

Darius: Well, I'm glad to hear that that's something that you've actually documented and seen, because that's what we were seeing and feeling here at the You Wealth Revolution is people were writing in. I'm starting to have like a different sense. Like things are a little more transparent, or I see the bigger reason behind things, or I have a different perspective, or I'm more intuitive.

Is it the fluoride in the water that actually causes the calcification of the pineal gland that we call the third eye? Is that's what's doing it?

Clayton: I believe it is the calcium. Primarily what it is is that the water or the calcium in the water is of the consistency that it is and it has to do with the formula that the calcium is.

When you restructure it, when you structure the calcium and the water, the formula or, let's say, what makes up the calcium has changed. So again the calcium structured can no longer adhere to itself or anything that it comes in contact with.

However, the calcium is bioavailable at the cellular level. It's essential for every cell to have calcium. It's essential for our bone development. But where we are today and the conditions that surround us prevent us from having the quality of flow, the quality of health, the quality of calcium that is essential for our life-giving properties, for us to stand up right.

It's not only for humans to stand upright; it's for the plants in the field to stand upright. Without calcium, they cannot. They fall over.

So it goes on and on and on. It's a symbiotic relationship. When one flourishes, everything flourishes. When one is healthy, all is healthy, and especially when you bring water into a healthy element, into a healthy being, everything in its field of influence becomes healthy. It is nature's way. It is the truth of nature. It cannot be otherwise. Believe me when I say this, if it were anywhere possible to be otherwise, humanity would not exist.

Nature is the most powerful existence there is. In many ways it is the creation of God. It is God. It is. And we are so fortunate in this time to be this close to stepping into it and knowing we are. It's exciting. Truly exciting.

Darius: Yeah. Amazing. Yet so many people are not aware. I was at a friend's house, one of my family friends, and there was guest a there and I walked past this bathroom and the door was open and I heard all this stuff hitting the water in the commode and it sounded like these pellets and so I went in... I just was kind of nosy and was like: 'What's going on?' I heard two people talking in there and they were literally flushing down pills - like prescription pills - down the toilet, I guess, to get rid of them. And I said: 'No, no, you don't do that. That stuff is going to get transmitted. The energy of those medicines, those things are going to get transmitted to people.' They just thought I was crazy. But that's a real possibility that can happen that as that stuff move through people it literally becomes part of the water's energetic blueprint, right, until it's energetically brought back in the balance?

Clayton: Exactly right. Exactly right. It is. It is surprising though how quickly that changes. I've got to tell you. I live in Arizona. I live close to Sedona. And I would say that probably every other person in Sedona has a structured water unit. The community has become very much in tune. I mean, it was in tune before, but there's a difference now. There is truly a difference. People are becoming much more giving, much more present, much more joyful.

I've been travelling and looking at other places in the world and I would choose a place that is in joy over anything else.

Darius: Yeah.

Clayton: Anyway, the water brings that about in a very significant way. Like I said, there's a lot of testimonials, a lot of things happening. We talk to people every day and get testimonials from people about when they have a fountain, the bees come, and they're drinking from their fountain.

The neat thing is when you are serving them, they will never harm you. They're in harmony. It's an amazing, amazing event. We have them all around. It's fun. The bees, the butterflies, the humming birds and just as hundreds of different birds. It's an amazing thing. It's fun and exciting.

We have a neighbor that had gotten some chickens and some ducks and some turkeys and they're in my yard all the time. They're here and they don't leave.

Darius: And they have water in their property too, but I guess they're just choosing yours. Is that what's going?

Clayton: Right. They choose to be where the energy is. They choose to be in a place of that energetic joy, that energetic uplifting.

Darius: Well, what I'd love to do is for any of you that have questions, I want hear from you. I want to connect with all of you. Send them to [youwealthrevolution.com/now](http://youwealthrevolution.com/now) - N-O-W - or just go to that page. That's where our Q&A box is.

I want to make sure that we get you the help you need, the questions you have about structured water. I also want to talk with Clayton about little things that you can do right now to begin structuring your water, even just by yourself with no unit, or at least making a difference energetically in the water that you have.

As I'm looking at those questions, I wanted to ask this, Clayton, about the toxins. What could be in our body right now? Because I've got this feeling that, okay, we've got water in our systems right now, we've got emotion maybe that's been locked away in our bodies for many years or we've got memories or feelings or challenges from water that we've been drinking - maybe they haven't been structured. Can that affect our life, you know, the energy in the water that's in our body now if it's unstructured?

Clayton: Absolutely. Absolutely. In a sense it's like a weight that's holding us back. And as you structure it... And we get testimonials. The unique thing about structuring also is again, when it has the ability to neutralize all energy - all toxic energy - and to enhance all the things that are good, but when you consume that water it also neutralizes the energy of, say, a scar, because there is the memory of the scar... The cells that make up your scars, basically they do it from memory. It passes that memory onto the next cell that's replacing it and it does that continuously.

When you start consuming and bathing in structured water, those memories of things that are not part of your DNA are neutralized. So people's scars tend to start falling off or disappearing.

Darius: Falling off?

Clayton: Falling off. Well, we say falling off. They actually disappear because the memory is not part of your DNA. It's being neutralized by bathing and drinking the structured water.

Darius: Okay. Now, here's a question that just came in from Cassandra: 'How would somebody bathe in structured water?' I think she might be seeing it like how many bottles would you have to put in a bathtub to be able to do that or fill up a pool or something else? How would one bathe in structured water?

Clayton: Well, if you have a portable unit - and I know that you have these portable units - Natural Action Technologies portable units available for people. If you have a portable unit, what you can do is you can take it in your bathtub and /or you can just run some of your bathwater through it. Or you can take it in your bathtub and just hold it under the water and run it back and forth several times in your bathwater and it will structure all the water in your bath.

Darius: Wow. Wow. That brings up another point. Are you saying that like one smaller component of structured water can actually affect a greater body of unstructured water?

Clayton: Absolutely. Absolutely. You can take a small amount of water anytime and you can structure virtually any size of a larger body of water.

Now, we provide and we do have units that will do larger volumes of water, but the thing about is, in the... And it's all about energy, okay.

So you can take a small amount of water and you can structure, say, a swimming pool or whatever for a short period of time, because the energy eventually does get consumed in the toxicity, especially when you're talking about the swimming pool. Swimming pools have chlorine, chlorine being an extreme toxin. But in the time that you're in that pool you can change the molecular structure of all the water in that pool with a small amount of water.

Again in the long term, and we always say further study is required, because what is that long term? Well, in the long term, in order to maintain a swimming pool or a larger body of the water, you need a consistent regular supply of structuring. You need to readdress it. And not everybody has the ability to go out to their swimming pool every day and add a little bit of water. So we have equipment basically or technology that will do it automatically. And the same thing for your home. We have shower units so you can place on your shower when you take a shower.

Darius: Now, why would you want to take a shower? I guess the water... So you're not really... unless people drink shallow water. I mean, it's touching your skin. Is that beneficial?

Clayton: Absolutely. What is does is when you take a shower, a structured water shower... 10 minutes in a structured water shower, your body will absorb seven cups of water.

Darius: Wow. Seven cups. Oh my gosh.

Clayton: Right. Exactly. So again structuring any water will make it instantly available at the cellular level. In other words, it will create an atmosphere of instant hydration.

Today, if you go and buy a bottle of water in a store and you start drinking it, your body has to make that water usable. And I'm going to give you a measurement called dynes – D-Y-N-E-S. Dynes is a measurement of viscosity or the tension on water.

Most surface water, most bottled water, is 72 to 84 dynes. For that water to enter into your body to make you hydrated, it has to be 46 dynes or less.

When you boil water, you lower that dynes down to 54. But still, even if you're drinking boiling water or very hot water, your body has to make the water usable. And I'm going to say this. It used to be at the age of 50 - 50 years old – the amount of time and energy that it would take to make the water that you drink usable, you could light your house up for a month.

That age today is down less than 30 years old, basically because the food that we are eating, the water we are drinking, the air we are breathing, everything is toxic.

Darius: Wow.

Clayton: So we are becoming less and less alive.

Darius: Right. Oh boy.

Clayton: So structuring water raises the biophoton energy living light in your body immeasurably. We have measurement devices that prove this. If you do kinesiology you can prove it to yourself, up one side and down the other. Just take a glass of structured water, hold it to your sternum and do a muscle test, kinesiology. Anywhere you want to go with it. Everything that you structure becomes healthy. It does not matter what it is.

Darius: I'm kind of just hearing that and in awe once again at this unit that I have on my desk right now just looking at and so thankful for it.

Why, Clayton, is this not being used in every city? Why is it that those people that are, I guess, running the cities and running states and running the country don't want people to be in this space? I mean, it would seem like it would cut down on illness, it would cut down on many different things and maybe even reduce crime and make people more joyful. What's the hesitation?

Clayton: The answer is greed. You know the word greed?

Darius: Yeah.

Clayton: That's the answer. Because you take any metropolitan large city, the amount of money they get from chemical companies alone is beyond your imagination daily. To break into that, again, like I said, the only way that I know we could possibly do this is from the ground up to bring the population into health. As that is occurring, it's going to feedback. I'm going to say this to you and hear me. Every cup of water that you drink, every cup of water structured that you drink, it passes through you and it doesn't stop. It continues to go and go and go. It goes into the grey water and it is already changing the cities. It's changing your community. If you have structured water in your home and you live in the city... I mean, we've done studies. We've done this test where a person put a house unit on in a city dwelling and come back a month later, and you have to go two blocks in order to find water that's not structured.

Darius: Wow.

Clayton: So the same thing happens in a field. We have video of strawberry fields. You put one unit on the energy, the energy from structured water changes everything a thousand feet in all directions. It takes time, but it does happen. If you structure water in a pipe and the water's running, so the water is structured when you shut off the flow, the water in that pipe through entrainment changes all the water as far forward as the water is and as far back as it goes, miles and miles and miles. Unlimited energy.

Darius: Amazing.

Clayton: So you have a house unit or you have an under-the-sink unit. You shut the water off... You're structuring for a little bit, you shut the water off, and all the water that's connected to that, all the way backward, all the way back into the connectors, it's changing the water. It's changing the energetic level and it's measurable. I know in measurable you will see it.

I had an individual call me just yesterday, lives in Maine. He said he got a structured water... In fact, he got it from your show.

Darius: Great. Great.

Clayton: And he connected up two portable units, filled the bucket with water, and he started. And he's an organic gardener. He's been an organic gardener for 15 years. He said he started watering plants with this, a little bit of water, a little bit of water. He got about three feet away and he turned around and looked at the first plant he did and he could see the change.

He said this whole year he's just been looking at the change, looking at the difference, looking at the energy. He planted beans, he said, and they grew six feet straight up...

Darius: Wow. Of my gosh.

Clayton: And they actually attached themselves to a bush - just a regular bush - and then on up to his trees. So he's been just observing the unbelievable magic.

It's difficult to describe, difficult to get people to understand and to accept. So he invites people out to come and see it and then what he does is he puts them... Before, he has them take a shower, and the changes that occur in young people and old people, up on one side and down the other, it is magical.

Darius: I wanted to ask a question. One person is asking about things that you've seen with people who use structured water. What are some of the things or stories that you've heard back from people and individuals?

Clayton: Virtually everything. With people... I tell you, a guy in Norway. He told me - and he is 85 years old. He said he had never seen... In his community nobody's has ever seen soapsuds, because the water is so hard, the soap never suds, never comes up to suds.

He put structured water units on in his home and he said his plumber and he spent 15 minutes laughing and enjoying soapsuds.

Darius: Wow.

Clayton: And his neighbors come to view soapsuds, to experience it. As it goes on and on. I have people that take a shower one time. They psoriasis or they have itchy skin. I've had people say in one shower... 95% gone in one shower. People will notice when they shower their hair is softer, their skin is softer.

One of the really, really neat things to me is we had a family in Mexico. They had a child that was experiencing a learning disability. One week of structured water, that girl actually outperformed a number of her classmates in school.

Darius: Wow.

Clayton: So the incidences of change are across the board. Everywhere the water goes it brings about a balance, harmony.

Now, I'm going to say one thing and I have to quantify this. Humans have freewill. I tell people when you're pouring water through a portable unit, bless it. That blessing goes to every cell in your body the moment you drink that water. And other things are I had a lady... I do a question and answer session for people and she spent two months travelling in India and Germany. She took a portable with her and a shower unit and she said she never bought a bottle of water.

Darius: Wow. Wow. If anyone's traveled overseas and gotten ill, I mean, that's a pretty incredible story, an incredible testimonial. Wow. Wow.

Clayton: And people travelling in Mexico. Three weeks in Mexico washing and bathing, drinking tap water, washing their fruit and their vegetables with a portable unit of water and bathing with the shower unit, showering three weeks. I believe that testimonial's on our website. It says basically no Montezuma's Revenue after three weeks.

And the neat thing here is they always spend three weeks, husband and wife, in Mexico as a vacation and they used to take a truckload of water with them. And what was the freeing part to all of these is that they just took two portables with them.

Darius: Wow.

Clayton: So they weren't tied down to that truckload of water. They were free to move throughout the country.

Darius: Incredible. Clayton, for the people that don't have a unit or just want to know, is there some things we can do just by ourselves with now apparatus, nothing, to at least bring some better qualities to the water we drink? I want to give people some suggestions or anything that you have discovered. What are some things that people can do?

Clayton: Well, one of the first things you can do is you can place your hands... you can draw a glass of water, a bottle of water, or a five-gallon bucket water, whatever you want to do. Place your hands on both sides of the container and either think of nothing at all or think of things that are pleasant – again, blessings, prayer. It works. Truly it does work.

It changes the molecular structure of that water. You have it within the palms of your hands. You have the power. Basically it's identically the same power as nature has and/or a structuring unit has.

The intensity of that energy between your hands can grow and grow and grow. I mean, the more that you acknowledge it, the more that you believe in your power, the greater the intensity of a biophoton energy that you are lighting up in the water. So as you consume that or anybody consumes that... And you can do it as a community.

But herein lies some of the drawbacks. If you have somebody that's not happy, somebody that's not enthusiastic about life, it can draw it down, it can make the water less available. That's why having a structured water unit... what it will do for you... you don't have to be in that upbeat space all the time. It does it for you. If you use it, you will change. Your world will change. I say to people all the time if they think that something is not happening for them, ask one of their friends. Ask your friend: can you see anything different about me?

Darius: Amazing. Yeah, I see that. We can do this, but our consciousness has to be really high. We have to be sort of in this really perfect state. If we're not, then we don't get that support, we don't get that. Whereas if we have somebody's technologies, it just becomes part of our daily lives. It's constantly lifting us higher and higher.

We've got a question from Cory who's asking: 'What about structured water and GMO food?' First, let's just take any food. Can it help the quality of foods and then maybe we can talk about GMO food a bit?

Clayton: Absolutely. And a way to do that - and we've done many tests here on food. If you fill a bucket or a container with structured water, one of the ones that I really love is I love meat - steak. So you take the steak and you submerge it in structured water for a couple of hours and then grill it. I mean, the flavors, the tenderness, everything changes. Everything. It makes it perfect.

You can do that with virtually any food - vegetables, fruits and the vegetables you buy. Just soak them in structured water for an hour or two. What it does is it raises the food value. A measurement device for checking food value is called a Brix meter. It's available... We can give you access to... I think it's on Amazon.com. You can buy them. They're like \$40, somewhere in that neighborhood.

But a Brix meter basically measures the food value of fruits and vegetables. All you do is you squeeze a little bit of juice from it on a meter, you close the lid and you look through it and it tells you the sugar value of the food that you are looking at. So a Brix meter gives you an indication of the value. And you can look at... Say, like you can buy an apple and look at the value. Take a little bit of the juice. Soak those apples in structured water and look at it again and you will see a 2 or 3% - if not more, higher percent. I mean, I've seen apples go up 6% food value just by soaking them a couple of hours.

Darius: Wow.

Clayton: Another thing that you can do to raise a food value is get a spray bottle. I don't know if you've heard this one yet, but these are some of the really unique things that are coming out of. And this came from a clinic in Arkansas. A lady in a clinic, she got this portable unit. She filled the spray bottle with structured water. And this isn't food, this is people. She said they serve a lot of elderly people. People come in and they need assistance. They need people to hold them up basically and to navigate them around.

She said two sprays from a spray bottle or their crown chakra, they almost instantaneously come into a place of being grounded and they are self-efficient.

They can move around, they can stand up, they can navigate through the clinic without assistance.

Darius: Wow.

Clayton: Now, the same spray bottle when you go to a restaurant... you can take the same spray bottle and spray your salad. You will increase the food value of your salad to the point that you can taste the difference in one spray. You can spray your beer, your wine, your orange juice, your coffee and instantaneously taste you will taste the difference. Coffee will be less acidic. So will tea. So will whatever you are drinking. And it will be extremely greater food value.

Another thing that we found is a lot of times people are wearing jewelry. The jewelry may have, let's say, adverse kind of energies. An example is if you wear glasses. You can spray your glasses, wipe them off, prime, put them back on and you will be able to see better and it won't be just because the glasses are clean; it will be that the energy, the adverse energy, in that plastic glass or whatever of all the people that have handled it...

Darius: Wow. Wow. Wow.

Clayton: It goes on and on and on and on. It's a never-ending story. And I invite everybody out there to explore and give us feedback.

Darius: Yeah. Wow.

Clayton: Because when you give me feedback you encourage the person next to you and the person across the world to do more, to look deeper, to explore. I tell you it's a growing evolution that is magic.

Darius: Yeah. These stories and just the things we've seen, I mean, are definitely magic. I mean, just being able to reopen up the third eye and being able to allow your body to absorb more water and be hydrated fully and work less to provide that nourishment that it needs. And the list goes on and on.

Clayton, as you started this journey of a uncovering this truth about structured and then as you wanted to create something to make this possible for people all over the world to utilize, tell me about the journey and what you realized the constraints were and what some of the solutions were ultimately in the development of these units.

Clayton: It's a long story. Actually the cause of the constraints in any new... is having enough money to do it and then it's finding the materials. That is how, you know... I mean, I know virtually everything that I've done in my life... Early on in my career I learn to ask the question, listen to the answer and then follow through with what the answer is.

I have taken that to a height of virtually everything that I do is in that form. I still myself ground myself - and again, everybody here, everybody in my organization has a spray bottle in their hand, and anytime they feel a lot of swords, they just spray their crown chakra. And instantaneously their physiology comes into perfect alignment. Their chakras line up perfectly.

So when you're in that state... You know, in the exercise that you did at the beginning 10 minutes prior to this event, it does the same thing.

As you're moving through the day and these obstacles come in your way, a simple solution is to spray your crown chakra, because what it does is it brings you into a non-stress place, a non-angry space, perfectly grounded. Believe me, when your chakras all line up perfectly, there is no place for a disease to harbor in your body.

But again back to my journey. My journey is and always has been to... And I have to kind of qualify this. It is that to be able to ask a question you have to have some experience. Evidently my experiences have been quite wide and my journey throughout my times here in life. But with learning and doing structured water and doing this technology, I have to question, and primarily the question comes in the form of what can I do? How can I provide a technology that will best serve humanity, that will best serve humanity's health and wellbeing now? And I receive the answer and I followed through and accomplished it. And that's where I am today.

Darius: Yeah. Amazing.

Clayton: And the technologies are constantly coming. I have people that want to join in that same avenue as standing in the room and saying: What else is possible? But always in the best interest of all concerned, primarily to aid humanity, to become.

The outcome is unlimited. It's that simple. Yet for many it's that difficult.

Darius: Yeah. Yeah.

Clayton: But I'll tell you this field of dreams is growing. This field of excitement and enthusiasm all around the world. What you, the people you are touching with this, all around the world, it's creating a tsunami of change.

Darius: Yeah. We feel it here. Wow. We all feel the energy. A lot of people writing in saying: 'This is just incredible. What an amazing man. What an amazing discovery and what amazing moment.'

Clayton, as we talk about this and people begin asking: 'Okay, how do I bring more of this into my life? How do I structure my own water? How do I use some of the technologies?' let's talk about what the technologies are, because they're different units that you've created. The ones that we have made available for people are essentially the portable unit. So talk about some of the different units, what they're made of, how they work, how easy they are to use, etc.

Clayton: Yes. The portable unit is handheld unit. You just pour water through. It's small. It's lightweight. You can take it anywhere. It's been probably in every airport in the world today. It used to be that you had to take it out and put in one of your shoes in a ways of going through.

Darius: Oh yes.

Clayton: People have asked me: 'So if you radiate it, does it harm it in any way?' Radiation does not harm it.

It is again lightweight. The exterior is made from a plastic that virtually all the household appliances are made of called ABS and it's food grade. The internal mechanism, the flow form on the inside, is called is food grade also and it's made from a material called HDPE.

Darius: Okay.

Clayton: And it goes on and on. Again you just pour water through it. It doesn't have to be under pressure. It's just flowing down through. It doesn't stay in the unit - just as long as it would take water to move through like five or six inches. As you pour it in it's available coming out the other side. And it's healthy. You can take any water from any source, anywhere in the world and make it healthy.

Now, there are some things that people would question here and that is when you're talking about things in the water like E.coli or cholera or Staph disease. We do have some testimonial about Staph disease – it eliminates it.

We had an individual in Haiti, where cholera is in the water. If you drink tap water in Haiti you would more than likely come down to cholera. What he did is he poured tap water six times through a portable and drank it with no adverse effect.

Now, at the universities we have proven that the energy of cholera, the energy of E.coli... and when you structure the water and those conditions, that the energy changes. Those E.colis and choleras and whatever, they can no longer harm you.

Darius: Wow.

Clayton: But on the other side of this, when you go to prove it and the only way of scientifically proving anything is from chemistry, chemistry deals with the physical world. So if you take the physical water that has been structured and put it back in a petri dish, if there's anything there at all it grows.

What we've also proven that is unstructured water in a petri dish and structured water, it reduces the amount of conditions or elements significantly. We haven't come to the place yet as to how much structuring would be required to totally eliminate it from growing in a petri dish.

Darius: Wow. Wow. Amazing. Well, we're getting quite a few questions about actually using the units and actually what they can do. We began to really talk about here the whole journey of structured water, the discovery, how it can remove emotions, toxins, memories from the water and even memories from scars, even bring your consciousness into alignment, and even uses that we don't even know yet, that we can all expand upon – using it in our garden so we can grow our own foods and we can allow the foods that we eat to be even more beneficial for us, and so many different things - our pets and so forth.

I want to talk a little bit, Clayton, about what your team has really graciously made available to us so that people can use this and even use it wherever they go. If they go to a restaurant, you know, take a little bit of water and structure it and then mix it with the food or with the water that you're going to drink and really I believe like bringing this high consciousness truth and vibration anywhere in the world and

anywhere with them. And that's one of the things that I'm most excited about as well.

I'm going to share the page and then I want to talk a little bit about what's here and we'll get into more specifics. You can go to [youwealthrevolution.com/clayton2013](http://youwealthrevolution.com/clayton2013). That's [youwealthrevolution.com/clayton2013](http://youwealthrevolution.com/clayton2013) – CL-A-Y-T-O-N2013.

Clayton, on that page, there's just a mountain of stories, mountains of testimonials. There's even pictures of... it looks like some amazing tomatoes from Mr. Lapahankuo's garden where he looks like gave structured water to these tomatoes and they're absolutely enormous.

Clayton: You know, I've heard about the website that you've put up. I haven't had any chance to see it today, but everybody is raving about it.

Darius: Yeah. Huge.

Clayton: It's exciting. It's excited everybody here, I'll say that for you. And so yes, you have a portable unit available and then you have a shower unit and a combination. You have some combinations available, right?

Darius: And I'll talk about those. It looks like what we've got is basically a few different options for people, as people were asking. We have a portable unit that people can get that is at the lowest price anywhere. We've really worked with your team to offer this incredibly low - lower than we ever have been able to. So there's a portable unit, which is Option One. And Clayton, the portable unit, some of the uses for that for people that want Option One would be what? They could use it structure their drinking water?

Clayton: Well, they can use it to structure the water. You can structure your water before you make coffee or tea and structure it again after. It just depends upon how you want to do it. But to basically structure your water as you're travelling, your bottled water when you're going through an airport and/or wherever you are in the world. It's just a matter of... And if you don't have a glass, the portable unit holds five ounces of water. You can hold your little finger over the outlet. Stick it underneath the water faucet and run water into it and what I do, especially where the water really has a lot of chlorine in, is I don't fill it up all the way and I hold my hand over the top and I just shake the water up and down. That multiply structures the water. And then drink it.

Darius: Wow. So that one unit people basically keep in your purse, keep in your car and use that. That's Option One.

Option Two... Actually what we put together was portable unit and a shower unit. So that's where people actually can let their body drink this water every morning through the skin. That's the shower unit. So it's a combination.

Tell me about the shower unit. How do they install it? What about people in other countries? Is it a standardized fitting or how does that work?

Clayton: It is. It fits on virtually every plumbing all over the world and the difference is basically in terminology. In the United States we measure our pipe on the inside of the pipe and it's half-inch pipe. Overseas they have the metric system. They

measure their pipe on the outside of the pipe and it's 15 mm. But I guarantee you it works. It screws onto the plumbing everywhere in the world and that's every country in the world.

Darius: Okay. And that's available...

Clayton: It provides you with a shower. Basically what you do is you unscrew your showerhead, which dispenses your water, and you screw this on in place of it and then it has a connector that you can screw the showerhead back on. Most people don't use the showerhead because, well, for one thing if you set the water right you can see what happens to the water. The water actually comes out in a braided fashion, just like you were braiding hair. You can see the difference in the right spin and left spin as it's coming out.

Darius: It's actually spinning and you see it spinning and you get under it. Wow. Okay, that's Option Two and this is at [youwealthrevolution.com/healwater](http://youwealthrevolution.com/healwater) – H-E-A-LWATER. It's 28% off for Option Two.

And Option Three is something that a lot of people have been asking for, which is there's a shower unit, there's the portable unit, which you get absolutely free, and there's the sink unit. I know this one of the things so many people have been wanting.

Clayton, Option Three has the shower, the portable, but also the sink unit. Tell me... The sink unit. That's to put – what? - your kitchen sink underneath or above?

Clayton: This is to go underneath the sink. Well, under-the-sink unit. Primarily it would go on your cold water line. And it come with two hoses. The hoses allow you to hook up to the shutoff valve that you would turn off underneath your sink. One hose goes on there and then goes to the unit, and then the other hose goes from the unit up to your water faucet. As you're running water, primarily... Say if you're going to water plants or drink water or utilize it for cooking, primarily you're using cold water. When you're going to use hot water, if you want it structured, just add a slight amount of cold water and all the water that comes from your tap will be structured.

Darius: Oh my gosh. You know, I'm getting chills, because what is so exciting to me is how literally you can just make this a part of your home and your home environment and just naturally as you turn on the water it is structured. It is already in this divine form that is going to help and serve you. It's just so incredible.

That's Option Three for people that want that and it is the best value. And I'm going to say this: we had a lot of people that want to grow their own foods. They want to maybe water their grass, they want to wash their dog and they're doing it outside with the hose, or wash their pet, or just clean the outside of their home and just use something that would be easier for the garden.

So we've even added a garden that's 20% off. That's Option Four. If you want that, that's available as well. You just kind of can choose which one you want, what's serves you. Most people have been reporting the Option Three is for just the best overall value. It's also 31% off. These are lower than anywhere else that you would find.

And we also did this: I want to say this: People have been asking and so many people last time said: 'Can you please accommodate us if, for instance, we needed a payment plan?'

One of the things here that we wanted to do is make this available to everybody. If you need a payment plan, write at [youwealthrevolution.com/clayton2013](http://youwealthrevolution.com/clayton2013). If you scroll down, you're going to hear a little bit about my story. You're going to see the incredible tomatoes from Mr. Laphankuo's incredible garden and you're going to hear a little bit about the fingerprint that water could be leaving in your body.

But then you're going to see these four boxes. Right under them there are the payment plans. So that information is all there for you. And we even have a very special opportunity that's running right now, so you'll want to go check that out.

Clayton, anything you want to add on the different packages as I've kind of explained them, or anything else we need to know about any one of those different options?

Clayton: No. It's just that the garden unit has connectors on that connect up to a hose. So wherever a hose goes, the garden unit connects in and you can connect it directly onto a sprinkler system and you can take it directly off the hose, be about from your house and hook a hose to it. So it has two connectors. It has a male and female hose connector on it. It makes it real easy to operate for a garden and/or just to play.

Darius: Wow. Okay. I want to get to some questions people are having. If you've had any experiences as well with the structured water as you use through our work here and what's been happening, I want to also hear that. We've gotten some incredible feedback coming back. One person wrote in and said: 'There's been a noticeable improvement in several areas. The water in our house is,' – this is from Bill - 'smoother taste. Baths and showers are more refreshing. My dry skin condition has improved. Numerous other changes. There's no more deposits on showerheads, cleaner shower walls, commodes cleaning.' Many, many things happening just in the outer world. A lot of people reporting better ability for feeling.

Phoenix, who's a spiritual healer, she says, as we talked about earlier: 'I have to share with you that my work with the nature spirits has increased tenfold as a result of using the structured water.'

Clayton, as you look at this and you think about this, what's your vision for the structured water and these units and what would you like to see in your dream world?

Clayton: My vision is to continually bring technologies into play that again aid humanity. We are working on industrial products now, being able to handle larger volumes of water. It's exciting. And the unique thing about it is everywhere we turn there are surprises and it's kind of like opening a box of Crackerjacks. There's always a surprise.

Darius: You know, I feel like when water is brought into its divine state it in essence... as we're being 70+% water, we get into our divine state, we begin to open up and unlock the way that we were supposed to be, the way that we naturally would be.

And that's what I think is so exciting about this.

Bryan from Salt Lake said: 'It was a long week and a shorter weekend and one Sunday I was just drained. My friend called me and told him I was really tired and being tired all the time. So he said he had something for me to try and brought over some water from Natural Action Technologies device,' - which is this structured water system. 'I was a complete skeptic as always and after drinking three glasses of the water I felt like a new person and so did my wife after she had a few glasses. We were both in awe. We had a raw natural energy that we hadn't felt in years. We went from exhausted to feeling 20 years younger in a matter of an hour. We both feel better now. Our skin is like silk. The itchy leg syndrome that's been haunting us and the rest of the country as we try to sleep is gone. The bathtub is clean and does not have the mold and buildup.' Another person said that.

Another person said: 'The device is magic. We wouldn't go a day without it.' That's just incredible, just incredible.

Clayton: And like I said, it just grows and grows. As people explore more out there with the opportunities, because of all the opportunity. So believe me, it's exciting for me. The real exciting thing for me is when people awaken to hear their voice, to hear their excitement, their enthusiasm for life as they awaken, it brings tears to my eyes sometimes when I hear the excitement in the voices of the people, because that's what this is all about. This is all about bringing humanity into and up to where it will be the best it can possibly be.

Darius: Yeah. Yeah. Quick question from Rita. She's in Tucson. I'd invite everyone to send in your questions if you have any. How long does a portable unit last? Meaning, I guess, the structure itself, the housing of the unit. How long does it last? Does it need filters replaced? I think people are maybe envisioning something a little different, but for my understanding it doesn't need anything. No maintenance generally, right?

Clayton: No. It's no maintenance. It'll last forever.

Darius: No filters. No maintenance.

Clayton: No. There's nothing to ever replace. There's nothing that you ever need to do. It has a lifetime warranty. You'll never have to replace anything or upgrade anything.

Darius: Yeah. And, you know, it's like that's the way it should be. Just like free renewable, free energy. It doesn't need batteries. It doesn't need electricity. It's just free naturally recurring energy that comes from that unit as the water goes through it. It does its thing.

Roberta is asking, Clayton: 'What if I put some in the water tank for my horses and cows? Does it stay structured in the sun?'

Clayton: Well, basically herein lies a slight problem. It will stay structured depending upon where you are and how intense the sun is. I always used to say when I lived in the northern climate that it would hold structuring for seven to ten days. And then I came to Arizona. In 123 degree sunlight it will stay structured about four days and you will

be able to see and/or feel the difference. But all you have to do is one or two things. You can take a spray bottle and spray it and restructure it, or you can just run it through a portable - run some through a portable. I recommend that really everywhere that you go, everywhere you go, that you take a portable with you and even if your water is already structured when you're about to use it, run it through the portable. The reason is because there's just a lot of adverse energy out there. There's the unseen world that is becoming more and more crowded with things that are not good for life.

Darius: Like what?

Clayton: Like energy from electricity, electromagnetic energy, microwaves, cell towers, microwaves, energy from the electrical system of your home, the electrical system from all the apparatuses in your kitchen, all the motors, all the electrical devices are creating a severe dissidence in the life form - which are people; all life. And what that electromagnetic energy tends to do is it tends to make the water hard. It makes calcium firm and so it causes the unavailability of hydration for water.

Darius: Wow. Wow. Wow. This is a definite tool that... really we can talk about conscious and we can talk about shifting emotion and moving energy, but this is something that physically we all need to be sustained on this water, and to change that structure of the water, to raise that vibration and allow ourselves to truly fully be hydrated.

Many of us - probably the younger generation... If you're born in the last 40 years, you've probably never really been hydrated with structured water in the way that you could be by using these devices. And certainly when you get into bathing in it and going on beyond that and eating structured food grown from the water, I mean, it's outstanding what you can begin to feel.

I want to read something. Pamela just wrote and she said: 'I started giving some structured to my plants. I gave my indoor plants a little drink. Three days later I noticed the leaves had turned a dark vibrant green. Not only had the leaves changed color but the texture had become turgid and strong. I was astounded to see such results in a short period of time.'

Clayton, I mean, this is pretty amazing. We've heard a story cats living a long time that were drinking this stuff and pets and all sort of this - like all life.

Clayton: I've received testimonials from people. A lady in Australia, her cat was 19 years old and the first shot of structured water it started acting like a kitten.

Darius: Whoa. Wow.

Clayton: And all she had was a shower unit, so she was drawing her water from the shower.

Darius: Sure. Oh, wow. And that's one thing people could do. But certainly, what we've done is there's no reason to do it that way. Just let it come through every part of your house or in the majority of the parts of your house so it can be enjoyed by your family. [Youwealthrevolution.com/clayton2013](http://Youwealthrevolution.com/clayton2013).

We've got just a little more time. I know we've gone long, Clayton. Sandy was asking about the effects on water with chlorine and fluoride. I do think we answered that, but is there anything else we can add about chlorine in water and fluoride and then using on one of the structured units on that?

Clayton: Right. Chlorine added to the water... and there's coming a new chlorine additive and I think it's chloramine. But chlorine basically is... When it's structured, chlorine turns to a gas. So if you have an under-the-sink unit for instance and you have chlorine in your water, what happens is when you first turn your tap on, you may get a little bit of smell from that chlorine, because again when it's structured it turns to a gas so that gas rises.

Chlorine gas is lighter than water, so it rises to the surface, but it's heavier than air. So it always just sits on the surface. And we used to have a lot of people could smell the chlorine when they drew a glass of water and I always tell them just blow on top of the water and the gas would go off onto a floor.

But again what it will do is it will make these new units, the dynamically-enhanced units that are on the website... That smell in the chlorine is most significantly gone. There's no adverse effect from the chlorine - and fluoride the same way. Fluoride, whether most people realize or not, is an accumulative element. So eliminating fluoride from your diet would be very, very essential for longevity of life, because fluoride makes you old, makes as you age.

Darius: Really? Oh, jeez.

Clayton: Absolutely. Look it up.

Darius: Wow.

Clayton: Makes you age. So when you structure fluoride it changes again the electromagnetic signature of fluoride has changed. So it energetically neutralizes the toxicity of fluoride. Fluoride really has no chemical makeup or physical makeup, so pretty much it's all eliminated.

And one of the things that people are going to ask is what happens to the physical. Well, going back to the apple on that tree, when you pick an apple... I even ask doctors this: what part of the apple goes into your cells? And they started going down through the list of all things. But the reality is it's the energy of the apple. The energy of the apple goes to your cells, riding on the water molecule. So everything that's good for life rides on the outside of the water molecule - and this is structured water now - rides on the outside is the water molecule and is made instantly available at the cellular level. So in all the physical... So everything you eat and everything you drink goes out your elimination system. Your body thrives and is driven on energy.

Darius: Yes.

Clayton: This is true throughout all living things. It's all about energy.

Darius: Yes. Wow. Incredible.

Clayton: So creating perfect energy will bring us into a very unique place in this time. It will bring us to a place of being much more aware of our surroundings, much more in tune and being able to discern the things that are good for us and the things that are not. In a sense what it will do is it will bring all of humanity into a place of taking their power back; knowing who they are; knowing what's theirs and what is not theirs.

And believe me, I see this and I hear of communities that this is on play; it's happening. And I really can't say this with any greater degree of enthusiasm and hope that all of humanity will get into the stream of this, because how they do, we all will be ready for the next leg of the journey.

Darius: Well, it is happening and it can make your journey easier and lighter, I found, when we are tuned in and when we are in that state. This is something that can help you in many ways and many ways we don't even know yet. We've talked about dozens and dozens.

[Youwealthrevolution.com/clayton2013](http://Youwealthrevolution.com/clayton2013). We've made it available. We've even included payment plans if anyone needs help. We don't want anyone to not be able to utilize this. If it's something that fits, that you feel would be a benefit to you or your family. Maybe if you've got a unit in the past and you want to find one of the best values anywhere, we've really as a company have been able to bring the price down. I think this, is according to my team, the lowest price anywhere for these units. We've been able to do some things because of our friendship with Clayton and our relationship that we couldn't do otherwise.

So just know that this is the absolute best and we want to serve you up to 31% off for these units. You can try them and use them and there's even a 30-day 100% money-back guarantee. I just want to let people know that so you can trust us that if it isn't something that serves you and you feel it in your heart and you use it and you're not happy, then certainly we will make it right and it's a 100% refund. But we did not get very many at all last time, if any, because as you feel the difference, you begin to know and realize it is something quite real.

Clayton, thank you so much for being here and coming back and sharing. This was...Gosh, I even got my goosebumps all over my arm because the things we start venturing into, you know, really is the future of humanity. I mean, this is a lot bigger than just one thing of water. This really is the future of our planet.

Clayton: Absolutely. And we just barely scratched the surface and what the potential is of water.

Darius: Wow. Wow.

Clayton: It barely scratched the surface. It's a magical journey unfolding and it's exciting. I'm very enthusiastically looking forward to the questions and to those out there that are willing and ready to explore, explore the infinite possibilities along with us. We're just exploring. We're just explorers on the road to health and wellbeing for the planet.

Darius: Thank you so much, Clayton. It's been an honor and a pleasure, as always.

Clayton: Thank you.
